Javascript (jQuery, React.js, ES6)
Typescript (Next.ts)
Three.js
HTML5
Node.js (Express.js)
Unix, Git
Python
NOSQL
SQL

WORK EXPERIENCE

Software Developer

Freelance

2018 - current / Atlanta, GA

- Built full stack applications for clients, friends, family.

PROJECTS

Movie Reel

- Built a front end web app to allow users to search for movie content by using a fetch API.
- the result of the fetch API is then passed to the second fetch API to dynamically render icon links that show what streaming platform the movie is currently being displayed on.

WeatherAPI

- Takes a city name and uses a geological API to convert that argument into the relative longitude, latitude, then uses that as an argument for a weather API then that data is dynamically rendered as 5 day forecast to the UI.

React Portfolio

- Utilized React.js and bootstrap to build a portfolio that dynamically renders content based off deciding which function component to mount.
- Utilized Bootstrap grid system to ensure proper display in all veiwwports.
- Clean and polished UI for smooth rendering to and from different components.
